Document Purpose and Audience

This document shows the application's requirements, case models and tables to be a guide base between the client and the developer.

The audience are the clients and users.

Introduction

Software purpose

- The goal of this project is to deliver a software application for helping developers to integrate/consume a soap web service into his/her final application.

Software Scope

- This project will work on converting the WSDL (using XML) to java files to perform the desired action, based on the web service that the user demands.

Software Requirements

- Convert the XML format to java code to configure the demanded web service method by the user.
- User can preview/alter methods manually.
